Customer : NJ Wastewater Treatment Facility
Location : NJ
Specialist : Kevin Bernick
Solution : Pulsarlube V with Chesterton 615 #2 Grease
Date Installed : August 1, 2006

Results : I installed 2 Pulsarlube V units on 1.25" bearings on a Hayward Gordon recirculation pump. The units were set for 6 months. Since installing the Pulsarlubes no bearings have been lost and lubrication has been guaranteed to the pump when it was done manually in the past.
